

## Steamboat Springs School District Secures Google G Suite with ManagedMethods

This regional K-12 public school district's IT team supports the needs of over 8,000 students and 1,000 staff members.

### The Challenge

A Colorado K-12 public school district's IT security team encountered potential compliance and security challenges when it transitioned to Google G Suite for cloud email services, document collaboration, and sharing.

Compliance requirements mandated that the district must have systems in place to monitor for sensitive data such as FERPA, HIPAA/PHI, Individualized Education Plans, and ensure that data is not being stored or shared in a way that violates policies. In addition, the rise of 3rd-party connected applications was presenting a threat to school data due to potential phishing attacks or unauthorized access. The district also needed to monitor for policy violations and scan documents for objectionable content (e.g., adult content and profanity) and keywords and phrases that would indicate a student is in danger (such as threats, bullying, and harassment.) When student safety is at risk, time is critical, so the IT team needed to be alerted of potential policy violations, as well deviations from normal data access and sharing behaviors.

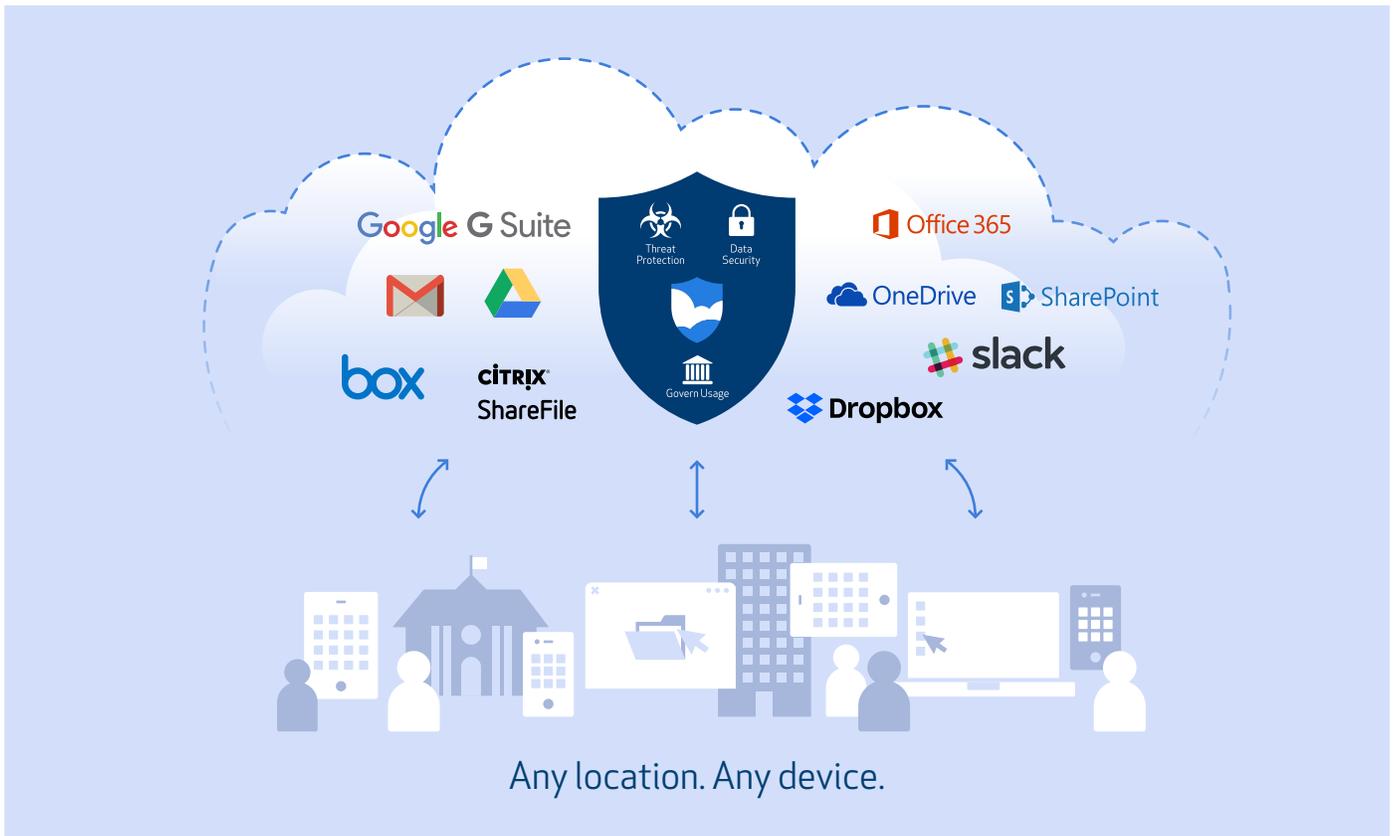

### The Solution

Cloud Access Monitor offers both out-of-the-box and customizable policy monitoring features to cover the district's compliance requirements to protect students against cyberbullying and exposure to inappropriate content. Cloud Access Monitor detects and alerts risks, quarantines sensitive information and remediates threats before they impact student safety or compromise identity.

**ManagedMethods' Cloud Access Monitor solution provided us a level of visibility we needed to ensure the security and safety of our students and staff. The solution was quick to deploy and gave us immediate insights.**

*Tim Miles, Director of Technology*

## ManagedMethods' Cloud Access Monitor provides:

- Complete Cloud/SaaS app visibility with no agents, proxy or gateways.
- Gmail and Office 365 Mail Attachment Scanning
- Discover and control 3rd Party Apps
- Malware Detection and Prevention
- Data Loss Prevention and Policy Enforcement

## About ManagedMethods

ManagedMethods makes Cloud Security Easy by quickly providing visibility into how data is stored, accessed and shared in popular cloud applications, including Google G Suite, Microsoft Office 365, OneDrive, and Sharepoint, as well as to secure cloud-based email, including Gmail and Office 365 Email. ManagedMethods' Cloud Access Monitor is the industry's only Cloud Access Security Broker (CASB) solution that can be deployed in minutes with no special training, and with no impact on users or networks.
